

Ekan® RD-35

Additive used to increase concrete pumpability. It can be applied before pumping in any weather condition.

Ready-Mix Concrete Admixtures
Admixtures to improve pumpability

CHARACTERISTICS

EKAN® RD 35 is a water-reducing plasticizer.

It is used to increase concrete pumpability across all concrete classes and can be applied before pumping in any weather condition.

Thanks to its special formula, **EKAN® RD 35** is compatible with all types of plasticizers except those based on naphthalene sulfonate.

EKAN® RD 35 should be added to the concrete mixer and mixed at high speed (5 minutes per 1 m³ of concrete).
